

LOAD BEARING OPTIONS

Load Bearing

FABCON DESIGNS, MANUFACTURES AND INSTALLS the market's strongest and lightest prestressed precast wall panels. Unique engineering and casting process produces panels that incorporate the finish, insulation and structure into a single component. The panels can be designed load-bearing up to 62 feet in height on multi-story buildings and support various mezzanine loads. The panels can extend to the top of the footing eliminating the foundation wall and designed to meet seismic, blast and wind loads in addition to dead and live loads.
